                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a combination which, comprises a number of polynucleotide probes comprising a sequence selected from one of the 1490 sequences mentioned in the specification. The combination is useful as an array element in a microarray for monitoring the expression of a number of target polynucleotides. The microarray is particularly useful in the diagnostics and treatment of cancer and immunopathology and neuropathology. The microarray is useful in diagnostics and treatment regimens, drug discovery and development, toxicological and carcinogenicity studies, of cremsics and pharmacogenomics. The microarray is also useful for monitoring progression of diseases and for developing sophisticated profiles for the effects of currently available therapeutic drugs. The combination is also useful for purifying a subpopulation of mRNNs, cDNAs and genomic fragments and in research and diagnostic applications. The carray can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose various diseases including cancer e.g. adenocarcinoma and leukaemia.

Can partinson's disease. The present sequence represents a polynucleotide probe of the invention. Note: The sequence represents a polynucleotide formet directly from USPTO et. The sequence data for this patent did not format directly from USPTO et.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           141

The invention relates to a composition of polynuclectide probes

comprising first polynucleotide probes comprising at least a portion of a

comprising at receptor-like polypeptide, second polynucleotide probes

comprising at least a portion of a gene encoding at transducing

colypeptide and third polynucleotide probes comprising at least a portion

composition are useful as array elements in a microarray for monitoring

the expression of target polynucleotides. The microarray is useful in the

composition are useful as array elements in a microarray for monitoring

the expression of target polynucleotides. The microarray is useful in the

composition and treatment of cancer, an immunopathology or a

neuropathology. It can also be used for drug discovery and development,

contrological and carcinogenicity studies, forensics or pharmacogenomics.

Contrological and carcinogenicity studies, forensics or pharmacogenomics.

Microarrays can also be used for monitoring the progression of diseases

contrological and carcinogenicity studies, forensics or pharmacogenomics.

Microarrays can also be used for monitoring the progression of diseases

confloyentides. The composition can also be used to purify a subpopulation

confloyentides. The composition can also be used to purify a subpopulation

confloyent in the disgnosis and treatment of cancer, e.g. cancers of

the adrenal gland, bladder, bone, bone marrow, brain, breast or cervix,

confloyent and munopathology, e.g. AlDS, diabetes, pancreatitis, osteoporosis or

confloyent dispanse or depression. This sequence represents a

confloyent dispanse or depression. This sequence data for

confloyent dispanse to the printed specification but was

confloyed the patent did not form part of the printed specification but was New composition comprising polynucleotide probes, useful as array elements in a microarray for monitoring the expression of target polynucleotides or purifying a subpopulation of mRNAs, cDNA, or genomic Claim 6; SEQ ID NO 1360; 73pp; English seqdata.uspto.gov/sequence.html.

Library is oligo-dr primed and directionally cloned (EcoRV site is destroyed upon cloning). Average insert size 1.5 kb, insert size range 1-3 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 019. Note: this is a NIH-MGC Library."

DNA Sequencing: DOB Joint Genome Institute: http://www.jgi.doe.gov

Clone Distribution: I.M.A.G.B. Consortium/LLNL:

http://image.llnl.gov

Naming Conventions: EST name is generated by the concatenation of
the JGI Clone id and the direction of sequencing. The suffix '.fwd'
indicates a forward sequencing read of the insert. It does not
necessarily reflect the orientation of the insert.

Plate: CAAO 0089 row: o column: 1

High quality sequence stop: 818.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CX955987 B75 bp mRNA linear BST 08-PEB-2005 JGI CAAO8456.fwd NIH XGC_tropTe5 Xenopus tropicalis cDNA clone IMAGE:7705563 5', mRNA sequence.

ECORI; Site 2: Not1; This normalized library was constructed from 1 million independent clones. CDNA synthesis was initiated using an oligo(dT) primer, using methylated C in the first strand synthesis reaction. Following this first strand reaction, double-stranded cDNA was blunted, ligated to NotI adapters, digested with ECORI, size-selected, and cloned into the NotI and ECORI compatible sites of a custom modified MCS of the pBluescript (KS+) vector. The library was normalized in 2 rounds using conditions adapted from Soares et al., PNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6 (1966): 791, except that a significantly longer reannealing hybridization was used."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CX885516 1inear EST 04-FEB-2005

Naming Conventions: EST name is generated by the concatenation of the JGI Clone Id and the direction of sequencing. The suffix '.fwd' indicates a forward sequencing read of the insert. It does not necessarily reflect the oxientation of the insert.
